

IN THE CLAIMS:

543
SUB
E1
1. (Twice Amended) Device for transforming the main supply voltage into a lower voltage, comprising a first connector that can be plugged into a main supply socket, a second connector that can be plugged into a consumer and an electronic circuit for transforming the voltage which is located between the two connectors, and wherein

the electronic circuit forms with the second connector (2) one rigid physical unit whereby the connection between the electronic circuit and second connector (2) is as short as possible and has a low electric resistance.

543
(4)
11. (Added) A device for converting a main supply voltage to a lower voltage comprising:

a housing;

a first connector coupled to the housing for connection to a main supply voltage; and

a second connector releasably coupled directly to the housing for connection to an electronic device, such that the second connector and the housing form a rigid unit when coupled together.

543
SUB
E1
12. (Added) A device as claimed in claim 11, wherein the housing includes an electronic circuit for transforming the main supply voltage to a lower voltage, and wherein the first and second connectors are electrically coupled to the electronic circuit.

543
(5)
13. (Added) A device as claimed in claim 11, further comprising a switch coupled to the housing for controlling the main supply voltage to the electronic device.

543
SUB
E1
14. (Added) A device as claimed in claim 11, wherein the second connector is releasably interchangeable with connectors having different connector layouts.

543
(6)
15. (Added) A device for transforming a main supply voltage comprising:
a housing, including an electronic circuit for transforming the main supply voltage;
a first electrical plug coupled to the housing for connection with an electrical outlet supplying the main voltage;

a second electrical plug releasably coupled to the housing for connection to an electronic device, the second electrical plug and the housing forming a rigid unit when coupled together; and

a switch coupled to the housing to control the supply of voltage to the electronic device.

543
SUB
E1
16. (Added) A device as claimed in claim 15, wherein the second electrical plug is releasably interchangeable with electrical plugs having different electrical plug layouts.
